WHAT IS OCEANX MARINE GROUP ?

OceanX Marine Group is a third-party marine services company that provides a range of customized solutions to support businesses in the commercial shipping, energy, cruise shipping, and yacht industries. The company offers project management, technical management, marine surveying and inspections, crewing, leisure craft management, management consulting, and executive coaching services. These services help clients optimize their operations, increase efficiency, and achieve their business goals while ensuring compliance with industry regulations. With its extensive expertise and experience in the marine industry, OceanX Marine Group is a trusted partner for businesses looking to grow and succeed in the marine industry.

One of the key benefits of partnering with OceanX Marine Group is its extensive global network. With access to more than 20,000 active contacts worldwide, and a strong presence in key maritime hubs around the world, OceanX Marine Group is very well-positioned to provide clients with access to a vast network of experts, suppliers, and service providers in the marine industry. This network can help businesses reduce costs, increase efficiency, and gain a competitive edge in their respective markets. By partnering with OceanX Marine Group, businesses can benefit from a global perspective and a wealth of knowledge and experience, enabling them to grow and succeed in the dynamic and ever-changing marine industry.

- ▶ Pre-vetting Inspections
- ▶ New Build Supervision
- ▶ Conversion & Refit Services
- ▶ Shipyard Repair Management
- ▶ Crewing Services
- ▶ Onboard Riding Repair & Maintenance Squads
- ▶ Technical Management Support

Inspections & Reporting

OceanX Marine Group can be hired to conduct a survey and inspection of a client's vessel, which had recently been involved in a collision. OceanX Marine Group's team of marine surveyors conduct a thorough inspection of the vessel, including the hull, machinery, electrical systems, and safety equipment. They provide the client with a detailed report of their findings, including recommendations for repairs and upgrades to bring the vessel up to current safety standards. The client is able to use this information to negotiate with their insurance company and to prioritize repairs to ensure the safety of their crew and seaworthiness of the vessel.

Repair & Maintenance

A client's vessel had been experiencing mechanical issues, which had led to several costly breakdowns and delays. OceanX Marine Group can be hired to diagnose and repair the issues, and to provide ongoing maintenance to prevent future problems. The team of technicians and engineers conduct a thorough inspection of the vessel, identifying several underlying issues that contribute to the mechanical failures. They work quickly to repair the problems and to implement a maintenance plan that would help the client avoid future breakdowns. The client is impressed with the speed and quality of the work, and is able to operate uninterrupted voyages for the remainder of the charter.

New Build Supervision

A shipping company had commissioned the construction of a new cargo vessel, but lacked the expertise to oversee the project themselves. They can hire OceanX Marine Group to provide new build supervision services, which include regular inspections and progress reports, as well as oversight of the shipyard's work. OceanX Marine Group's team of experts provide valuable guidance to the shipping company throughout the construction process, identifying areas of concern and making recommendations for improvements. They work closely with the shipyard to ensure that the vessel is being built to the highest standards of quality and safety, and that it meets all relevant regulations and requirements. Thanks to OceanX Marine Group's oversight, the shipping company will be able to take delivery of a reliable and efficient cargo vessel that is designed and built to meet the specific needs of their business. The vessel is successfully integrated into the company's fleet and helped to improve their operations and profitability.
